

Avatar®

Controls and prevents:

Chinch bugs, Armyworms, Fire ants, Cutworms, Sod webworms, Mole crickets, Leafhoppers, Harvester ants, Black Turfgrass Ataenius and many other pests

Choose Avatar, Save Dollars and Scents.

Avatar® is your better, more economical option for broad spectrum control of dangerous turf and landscape pests, both quickly and in the long run. A low-odor formulation of the popular ingredient, acephate, Avatar gives you highly effective control while also reducing the risk of insect resistance later. Avatar is available as a 75% WSP

in 1-pound, water-soluble packets and provides 14–21 days of control at rates from .5 to 1.9 oz. per 1,000 sq. ft. (1.33 to 5.29 lbs./acre). Avatar is labeled for use on golf courses, ornamental trees and shrubs, sod farms, greenhouses, outdoor floral plants, groundcover and non-crop areas.

Features	Benefits
Contact plus systemic mode of action	Excellent control of labeled pests for up to 21 days, with no known resistance issues
Broad spectrum of control	Effective control of chinch bugs, armyworms (fall, yellow, striped, Southern), imported fire ants, sod webworms, cutworms, mole crickets, leafhoppers, black turfgrass ataenius and many other pests
Multiple use sites and application modes	Can be applied on both warm- and cool-season turf, landscape plantings, nursery crops, etc., either as a broadcast spray or as a mound treatment for ants, including imported fire ants and harvester ants
Compatible with other pesticides	Avatar can be tank-mixed with a variety of pesticides to reduce the number of applications and to provide broader spectrum of control with less likelihood of insect resistance
Conveniently packaged in 1-pound water-soluble packets (5 packets per resealable container)	No dust, lower odor and more accurate measuring

Directions For Use:

Apply Avatar with ground equipment using sufficient volume of spray material for thorough coverage: 1 to 10 gallons of water per 1,000 sq. ft., depending on pest and usage rates. Use higher recommended rates under severe insect pressure. Always calibrate sprayers prior to use. On golf courses, do not apply more than 4 lbs. active ingredient per acre per application, and wait at least three days between applications. Continuous agitation is recommended to keep product in suspension. Grass immediately adjacent to mound treatments may be temporarily injured.

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Avatar to 1-888-240-8856 for prompt attention.
