

Dovetail™

Controls and prevents:

Brown Patch, Anthracnose, Dollar Spot, Leaf Spot, Pink Snow Mold and others

A Double-Duty Fungicide For Proven Disease Control.

Dovetail™ combines two proven active ingredients—iprodione and thiophanate-methyl—for effective control of problem diseases. The 1:1 ratio of iprodione to thiophanate-methyl in a convenient-to-use flowable formulation provides the optimal control of a broad variety of diseases, including brown patch, anthracnose, dollar spot, leaf spot/melting out and pink snow mold. Since it contains active ingredients

with different modes of action, Dovetail provides a minimum of 14-day control and is an important tool in resistance management. Dovetail is labeled for use on golf courses, landscape plantings, commercial lawns and in nursery/ornamental crops. Dovetail is packaged in convenient 2.5 gallon containers, with two containers per case.

Features	Benefits
A synergistic combination of two proven fungicides with different modes of action	Provides long-lasting control and is useful in avoiding disease resistance
Broad spectrum of control	Effectively controls many problem diseases such as anthracnose, dollar spot and brown patch
Locally systemic and acropitally system activity	Provides quick penetration and translocation upward in the plant via crown and root absorption
Multiple use sites	Can be used on both warm- and cool-season turf as well as on landscape plantings, commercial lawns and nursery and ornamental crops
Compatible with other fungicides	Can be mixed with a variety of other pesticides to reduce the number of applications required and to provide broader spectrum of control while reducing the likelihood of disease resistance
DMI replacement	Does not contain any DMI fungicide, so no unwanted growth regulation occurs, yet Dovetail still provides up to 21 days of preventive control

Directions For Use:

Apply Dovetail with ground equipment using sufficient volume of spray material to provide thorough coverage. Continuous agitation is recommended to keep the product in suspension. Use the higher recommended rates under severe disease pressure. Allow a minimum of 14 days between applications. Do not make more than six applications per year. Always calibrate sprayers prior to use. Use 2-7 gallons of water per 1,000 square feet. When treating golf greens, always treat aprons and approaches to reduce chance of carrying disease onto greens.

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care’s local distributor network for responsive service and support. You can also direct any questions regarding Dovetail to 1-888-240-8856 for prompt attention.
