

# Raven®

**Controls and prevents:**

Dollar Spot, Brown Patch, Gray and Pink Snow Mold and many other turf diseases

## Would You Prefer A Fungicide That Controls Faster Or Longer? How About Both?

Raven® fungicide has a special formulation that helps maximize control of a broad-spectrum of common turf diseases, including dollar spot, brown patch, gray and pink snow mold and other destructive fungal problems. Because it contains iprodione, a locally systemic active ingredient, Raven can give you 14–21 days of effective control. Better yet, Raven also provides quick

knockdown of diseases at the time of application, even during extreme summer heat and humidity. Raven starts controlling mycelium within 24 hours of application, which means faster turf recovery and better prevention of additional damage. Raven can even be used in a resistance management program as a reliable tank-mix partner or rotational product.

Features	Benefits
Broad spectrum of control	Controls dollar spot, brown patch and leaf spots, as well as other fungal problems including gray and pink snow mold, curvularia, anthracnose (suppression only) and fusarium patch
No known resistance	Used in a disease management program, Raven reduces the likelihood of disease resistance from single-site inhibitors such as triazoles and strobilurins
Advanced formulation	Proprietary formulation contains two pounds of iprodione and provides excellent tenacity, dispersion and suspension
Compatible with other fungicides	Can be tank-mixed with other labeled products to broaden and extend the disease control
Locally Systemic	Enters the plant more effectively and delivers up to 21 days of control plus quick knockdown of existing disease

### Directions For Use:

For golf course fairways and other turf, apply 5–10 pints per acre of Raven on a 14–21 day interval. For golf greens and tees, apply 2–8 fluid ounces per 1,000 square feet on a 14–21 day interval. Optimal use rate is determined by target disease and length of control desired. As part of a resistance management program, Raven can be tank-mixed with a variety of complementary products, including Pegasus™ HPX and Pegasus™ DF, Kestrel®, T-Bird® and Peregrine®. To control pythium and phytophthora, tank mix Raven with Vital®, Vital *Sign*™, Flanker™ or Autograph™. Do not enter or allow others to enter treated area until spray has dried.

### Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care’s local distributor network for responsive service and support. You can also direct any questions regarding Raven to 1-888-240-8856 for prompt attention.
