

# Siskin™

**Controls and prevents:**

Dollar spot, anthracnose, summer patch, brown patch, powdery mildew, rust and scab on turfgrass as well as many fruit trees and landscape ornamentals

**Get Effective Fungal Control On All Parts Of Your Golf Course...And Beyond.**

Siskin™ fungicide expands choices and flexibility when dealing with disease problems. Siskin is a Group 3 fungicide containing 19.7% (1.67 lbs per gallon) myclobutanil, a proven active ingredient known for its outstanding performance and wide range of uses. Siskin provides systemic control of common turf diseases, including powdery mildew, dollar spot, anthracnose and many others. Because it has

minimal phytotoxicity risk and low use rates, Siskin can be applied on and around landscape ornamentals such as chrysanthemums, daylilies and roses. Siskin also treats fungal problems in fruit trees. Siskin offers a tremendous variety of tank-mixing opportunities, making it an even better fit for your current disease control practices and IPM or resistance management programs.

Features	Benefits
Very low phytotoxicity	Siskin gives you peace of mind knowing that it poses little danger to target and non-target vegetation
Multiple use sites	Simplifies your job and reduces product inventory because it can be applied on greens and tees, fairways and roughs, and landscape ornamentals
Systemic mode of action	By working through the plant, Siskin delivers effective, long-lasting disease control within 60 minutes of application
Great tank-mix options	Tank-mix Siskin with Raven™, Dovetail®, Peregrine®, or T-Bird® for broader control and resistance management, or partner it with Vital®, Vital Sign® and Autograph® for midsummer applications
Compatible with Plant Growth Regulators	Siskin can be used confidently with little, if any, antagonism with Plant Growth Regulators such as CutDown™ or GoldWing®
Low use rates	Conveniently combine the systemic protection of Siskin with contact modes of activity (Pegasus™ or WingMan®) on a 7- or 14-day schedule

**Directions For Use:**

Read the entire label before using Siskin. When applying Siskin, be sure to use sufficient spray volume to provide thorough coverage. For use on golf greens, always treat aprons and approaches as well, to reduce the chance of disease being carried onto the green. Use 2-3 gallons of water per 1,000 square feet of treated area. Apply the higher recommended rates under severe disease pressure. Calibrate sprayers prior to use, and maintain continuous agitation to keep the product in suspension.

**Field Support:**

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Siskin to 1-888-240-8856 for prompt attention.
