

TernStyle™

Controls:

Knotweed, wild onion, wild garlic, wild carrot, common burdock, dandelion, cloves, thistles, docks and pepper weed, water hyacinth and water milfoil

Now Get Broad Spectrum Systemic Weed Control On Turf Or In Water.

TernStyle™ post-emergence herbicide gives you a variety of ways to improve your weed management. Using 2, 4-D amine (3.8 lbs. per gallon) as its active ingredient, TernStyle provides effective systemic control on a wide range of emerged broadleaf weeds. Then, TernStyle lets you increase its performance and add residual weed control by offering several

tank-mix options to fit your specific challenges. Those available tank-mix combinations also help you avoid problems with resistant weed species. For added convenience, TernStyle is labeled for both turf and aquatic applications. You can use it for weed control on golf courses and other commercial/residential situations along with most pond or lake environments.

Features	Benefits
Effective broad spectrum control	Delivers systemic control of common broadleaf weeds in turf, including dandelion, wild onion, knotweed and many others, plus water hyacinth and water milfoil in aquatic applications.
Tank-mix options for greater efficacy	Provides better performance and long-lasting residual control when tank-mixed with other Phoenix herbicides such as Knighthawk®, Harrier®, Thrasher™, Rook™, Current®, GullWing®, and Kraken™.
Less chance of resistance	The versatility and tank-mixing range of TernStyle can help you minimize the risk of herbicide resistance, and assure better weed control later.
Multiple application sites	On golf courses, TernStyle works on fairways, roughs, tees, greens and ponds. Other sites include commercial/residential lawns, canal ditch banks and forestry injection, as well as retention ponds, lakes or restoration areas.
Low volatility	Unique amine formulation reduces unexpected volatilizing, so you can use TernStyle around sensitive plantings or other non-target vegetation.

Directions For Use:

Treat when weeds are young and actively growing. Apply TernStyle at rates of 2-3 pints per acre for annual weeds, or 3 pints per acre on biennial and perennial weeds. Calibrate sprayers prior to use, and always apply with sufficient water to ensure thorough and uniform coverage. Do not apply TernStyle through any type of irrigation system. Make no more than two applications per year (excluding spot treatments). Do not enter treated areas or allow others to enter until spray has dried. For aquatic uses, apply 2-4 quarts per acre to control water hyacinth and 5 gallons per acre to control water milfoil.

Field Support:

Phoenix Environmental Care maintains a wide network of local distributors who provide high levels of product and technical support. For added convenience, simply direct any questions about TernStyle to 1-888-240-8856 for prompt attention.
