

Vireo™ MEC

Controls and prevents:

Pythium, phytophthora, yellow tuft, and a variety of other oomycete diseases on turfgrass, lawns, landscape plantings, nurseries and sod farms

Get Effective Control At The First Sign Of Fungal Diseases...And Keep Them Away Longer.

With Vireo™ MEC your choices for controlling fungal disease just got a lot better. Using the proven active ingredient metalaxyl, Vireo MEC provides systemic control of many common oomycete diseases, including pythium, phytophthora and yellow tuft. Labeled for a wide range of uses, Vireo MEC is available in a

proprietary no-odor formulation. It provides excellent tank-mix compatibility and stability. Vireo MEC can also be tank-mixed or rotated with other pesticides to enhance control and promote economical resistance management.

Features

Benefits

Systemic mode of action

Vireo MEC works through the grass to provide highly effective control of labeled diseases for up to 21 days, depending on rates and disease pressure

Curative plus preventive control

Starts controlling at the first sign of disease occurrence, and can be conveniently used in a longer-lasting preventive program

Multiple modes of application

Vireo MEC gives you flexibility, as it can be applied as a foliar spray, soil drench or via chemigation

Multiple use sites

Simplifies your fungicide program by working on warm- and cool-season turf, as well as landscape plantings, lawns, nursery, ornamentals, and sod farms

Compatible with other pesticides

Improve resistance management and extend the spectrum of control by tank-mixing with other products such as WingMan®, Pegasus™, Raven®, Peregrine®, Dovetail®, Kestrel®, T-Bird® or in rotation with Autograph®, Vital® or Vital Sign®

Unique formulation

Vireo MEC is specially made for unsurpassed control of pythium and phytophthora, and it offers zero hour re-entry for soil applications or drench, no odor and easy handling

Directions For Use:

Read the entire label before using Vireo MEC. Apply Vireo MEC with ground equipment, using sufficient spray volume to provide thorough coverage. When treating golf greens, always treat aprons and approaches as well to reduce the chance of carrying disease onto the green. Use 3-5 gallons of water per 1,000 square feet of treated area. Apply the higher recommended rates under severe disease pressure. Always calibrate sprayers prior to use, and maintain continuous agitation to keep the product in suspension.

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Vireo MEC to 1-888-240-8856 for prompt attention.
