

Vital®

Controls and prevents:

Pythium in both warm- and cool-season grasses

The Research-Proven Way To Get More Effective Pythium Control In Turfgrass.

Vital® is an EPA-registered systemic fungicide for preventive control of Pythium in cool- and warm-season turfgrass varieties. University and independent research trials consistently demonstrate that Vital effectively provides exceptional Pythium control. In addition, the active ingredient in Vital stimulates plants' natural defense

mechanisms, which improves overall turf health. Combined with various registered fungicides, Vital helps manage other disease complexes associated with turfgrass stress and decline. Vital is available in a 2.5-gallon container and a 7.5-gallon BATPak®.

Features	Benefits
Highly systemic	Moves quickly throughout the plant without being washed off or tied up in organic matter, which improves long-term fungal disease control
Dual mode of action	Prevents establishment of Pythium in turf while activating the natural defense mechanism in plants
Multiple sites of action	Extremely low probability of resistance
Contains no aluminum, has near-neutral pH of 6.5	Allows more application flexibility; conveniently tank-mixes with WP, DF, EC and flowable formulations to reduce number of spray trips
Liquid formulation	Easy to handle and mix

Directions For Use:

For golf course fairways and greens, apply 3–6 fluid ounces per 1,000 square feet. Begin preventive applications when conditions first favor disease development, and repeat applications at 14-day intervals. Do not mow or irrigate treated areas until foliage is completely dry.

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Vital to 1-888-240-8856 for prompt attention.
