Phoenix Environmental Care LLC Adds Symmetry[®] NXG Algaecide to Product Line

Valdosta, GA— Symmetry[®] NXG algaecide has been added to the rapidly expanding product line from Phoenix Environmental Care LLC. “Symmetry NXG is a copper based algaecide that is an advanced formulation of NexGen and a part of our continuing effort to provide the most effective and user friendly products available,” says Craig Smith, Aquatic Products Manager.

Symmetry NXG is based on the superior chelating agent copper/TEA. That means it provides excellent control of algae while requiring less copper per acre to do that. Symmetry NXG stays suspended longer in hard and turbid waters, so it delivers better performance when compared to other chelates.

Controlled pests include blue green algae, diatoms, flagellates, green algae and branched algae such as chara.

Smith says Symmetry NXG will carry a “Caution” signal word as opposed to “Warning” on most competitive formulations. “This eliminates the respirator requirements that are present on competitive formulations,” says Smith. “It also eliminates the ‘may be fatal if inhaled’ statement still found on old competitive formulations.”

Phoenix Environmental Care LLC specializes in turf, nursery, ornamental and aquatic products. Symmetry is a registered trademark of Phoenix Environmental Care LLC. Always read and follow label directions.
